

Water Billing

In a water organisation a reliable and punctual bill generation process is crucial. The Water Billing module is a full-featured utility billing system by itself, suitable for all sizes of water organisation. Features include customer details, billing and payment collection.

Automated and flexible at the same time, automated tasks such as Meter Reading Books generation are generated easily with a built in Wizard function. Miscellaneous billing charges may be keyed in manually as well. Payments can be keyed in or scanned in using barcode scanners, or uploaded from flat files from third party collection centers. Different tariffs and customer categories are easily maintained in reference tables. Multi-lingual capabilities enable ease and familiarity in using the system.
